

Irish Moiled A.I Bulls

2021 Catalogue

FOREWORD

Bulls in the main section of the catalogue are eligible for use by all breeders of cattle throughout all of the UK and the Republic of Ireland.

The semen from bulls in the 'Other Bulls available' section is not exportable and can only be used in the area of origin. Some of this semen stock, owned by the IMCS is extremely limited and use will be restricted to fully paid up active pedigree breeders of the Irish Moiled Cattle Society on special recommendation.

Breeders will be inclined to use the ICBF Star Rating System to help with their bull selection. It must be highlighted that as the reliability of the data increases the star rating score may change. All bulls are genomic tested which contributes to the star rating score and the reliability. As the Irish Moiled breed is a relatively small population of cattle a breed specific genomic profile is quite some time off, however the more Irish Moiled samples that are sent to ICBF for genomic testing, will allow a breed specific genomic profile to be developed, and hence the more accurate/reliable genomics will become in the Irish Moiled breed.

The polled gene test at Weatherbys is not validated for the Irish Moiled breed and breeders should not rely on the test for breeding decisions. Further research in the future will be done to validate this test for the Irish Moiled breed.

All bulls in the main section of the catalogue owned by the IMCS have undergone a semen quality motility test. Semen with a motility score of 40% or over is considered excellent quality. Semen with a motility score of around 35% is considered very good quality. Semen with a motility score of 30% is considered average quality and semen with a motility score of 20% or under is considered to be poor quality.

Waikato Alister **EX91** 5004 (pp)

DOB; 05/09/2017

Breeder; Basil Lawson (GB - UK)

Colour; Typical

- Sire; Clandeboye Duncan
- Dam; Waikato Alice 14
- MGS; Glassdrummond Fire
- No. Reg sons; 0
- No. Reg daughters; 0

- A.I code; IM6025
- Owned by IMCS
- Genomic tested
- Classified; **EX91** (2 year old)
- Semen Quality; 41.2% progressive motility

Daughter; 2 weeks old

Son; 2 weeks old
